Activity 3 Progress Report — Draft

Batumbakal Gym Membership Management System

Group 99 | Louis Andrei de Guzman and Mark Timothy Casilan | November 4, 2026

1. Project Overview

The project is a gym membership management system built with Java Spring Boot, PostgreSQL, and a browser interface using HTML, CSS, and JavaScript.

2. Implementation Progress

Implemented components include the PostgreSQL database with eight tables and sample records; Spring Boot model, repository, service, and controller layers for all eight modules; REST endpoints; and a browser interface integrated with the API.

Modules: Members, Trainers, Membership Plans, Memberships, Payments, Classes, Class Enrollments, and Attendance.

3. Testing Performed

During development, CRUD operations were exercised for all eight backend modules. Attendance GET, POST, PUT, and DELETE were tested. The browser dashboard was opened and all eight module sections were checked for loading records.

Evidence required: Insert actual screenshots of the dashboard, module pages, representative Postman requests/responses, and PostgreSQL records. This draft does not contain fabricated screenshots.

4. Issues and Resolutions

Antivirus protection initially blocked Git/Maven file operations; development continued after the blocking issue was resolved. The frontend initially returned a 404 because static files were outside the expected Spring Boot static folder; placing them in src/main/resources/static resolved it. Database credentials are moved to environment variables in this prepared version.

5. Remaining Work

Capture and insert evidence; verify setup from a clean database; complete cross-group testing and record feedback; publish the Git repository and invite the required collaborator; add the actual tracker entry; and attach the final PDF report as required.

6. AI Assistance Declaration

AI assistance was used during development for code scaffolding, troubleshooting, and documentation preparation. The project members should review, understand, run, and verify all submitted code and documentation, and disclose the assistance in the format required by the instructor.

7. Cross-Group Testing Record

Other group / tester	[Fill in after testing]
Date	[Fill in]
Tested features	[Fill in]

Issues found	[Fill in]
Resolutions / feedback	[Fill in]

This is a draft. Complete all placeholders with actual evidence and results before submission.
