BATUMBAKAL GYM

Membership Management System

ACTIVITY 3 — IMPLEMENTATION PROGRESS REPORT

Project	Batumbakal Gym Membership Management System
Database	grp99_gymdb (PostgreSQL)
Backend	Java Spring Boot
Frontend	HTML, CSS, JavaScript
Repository	https://github.com/louisandreidg/Batumbakal-Gym

1. Project Overview

Batumbakal Gym is a gym membership management system developed to manage members, trainers, membership plans, memberships, payments, classes, class enrollments, and attendance. The application uses a Java Spring Boot backend, a browser-based frontend, and a PostgreSQL database.

2. Implemented Modules

Module	Available evidence
Members	Frontend page, database records, GET API response
Trainers	Frontend page, database records, GET API response
Membership Plans	Frontend page, database records, GET API response
Memberships	Frontend page, database records, GET API response
Payments	Frontend page, database records, GET API response
Classes	Frontend page, database records, GET API response
Class Enrollments	Frontend page, database records, GET API response
Attendance	Frontend page, database records, GET API response

3. Testing Summary

The Postman screenshots show successful HTTP 200 OK responses for GET requests to all eight API resources. The PostgreSQL screenshots show the database table listing and query results for the system's tables. The frontend screenshots show the eight management sections displaying records.

4. Remaining Work / Limitations

Cross-group testing could not be completed because we were unable to coordinate with another group and test their system. Because of this, no cross-group testing results are included in this report.

5. AI Assistance Declaration

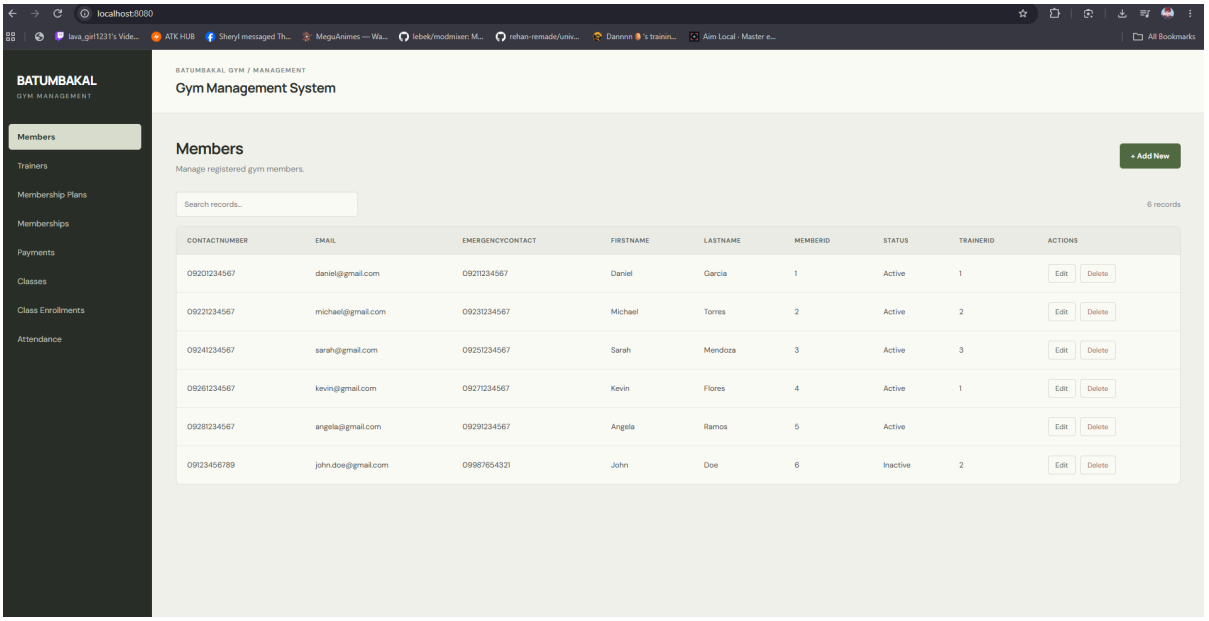

We used AI tools to help us understand some programming concepts, fix errors, and set up the database. AI also gave us suggestions on how to improve parts of the system.

We checked and tested the system to make sure its features worked properly. Our group is responsible for the final project and its results.
